MISSOULA--

The Wilderness Institute at the University of Montana School of Forestry will be among 40 college environmental studies programs featured in a book to be published next month.

The book, according to its editors at Ohio State University, contains articles on college programs that a national panel nominated as "outstanding examples of...university response to the environmental era." The book is co-edited by John Disinger, Professor of Environmental Education at Ohio State, and Clay Shoenfeld, nationally known environmental researcher and writer. Dr. Robert Ream, executive director of the Institute, said the chapter on the Wilderness Institute "highlights its uniqueness in providing educational opportunities to students, while simultaneously making substantial social contributions to the public process of wildland planning and management."

The book, titled "Environmental Education in Action," will be available at the end of May from the ERIC Information Analysis Center at Ohio State University, Columbus, Ohio, 43212.
